

Enfermedad cardiovascular y adicciones. Propuesta de curso electivo para estudiantes universitarios

Anexos

Tabla 1.

Relative risk for coronary artery disease hospitalization according to coffee drinking*

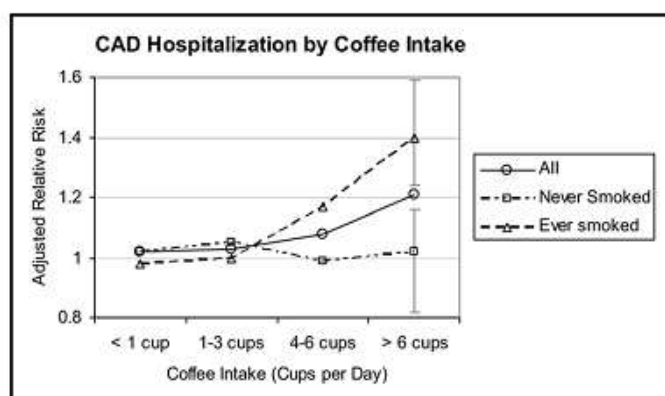

Group (cups/day)	RR	95% CI	p Value
Never or seldom	1.00	Referent	—
<1	1.02	0.94–1.10	0.7
1–3	1.03	0.97–1.09	0.4
4–6	1.08	1.00–1.07	0.05
≥6	1.21	1.10–1.34	0.0002
≥4†	1.12	1.04–1.20	0.003
Per cup per day†	1.02	1.01–1.03	0.0001

* Among 123,016 subjects, of whom 8,357 had CAD; models included age, gender, ethnicity, smoking, and coffee consumption.

† Separate models.
